

Gil L Bueno

Technical Product Owner

gilbueno.mail@gmail.com [Telegram](#) [Github](#) [LinkedIn](#) [x.com/melanke](#) Sao Paulo, Brazil (UTC-3)

I'm a Technical Product Owner with 19+ years in software and 12+ years owning product decisions next to engineering teams of up to 30. I co-founded Simpli and grew it from a two-person startup into a 30-person software house that delivered 50+ products — which meant running discovery, requirements and roadmap for a new product every few months, across logistics, fintech, media, education and Web3.

My work is turning stakeholder needs into functional requirements, wireframes and a prioritized backlog, then staying close to delivery so scope, feasibility and deadlines stay honest. I owned the product vision and usability of Enclave Wallet, wrote the requirements and roadmap for Louis Dreyfus Company's global Safety, Health and Environment platform, and shaped products that reached real numbers: 50M+ invoices on iTrack, US\$1.6M GMV on Apptite, 100k users on Sharity.

Coming from engineering means I can size technical trade-offs myself, argue architecture with the team, and cut scope without breaking the system. Lately I've been putting AI to work inside product and delivery workflows, from agent-assisted development to process automation. I'm looking for a role where I own the problem, the backlog and the outcome.

Notable Achievements

- Neon Wallet – Over US\$1 Billion in traded volume
- Runin Multilaser – Embedded in over 20 Million devices
- iTrack – 50 Million invoices registered; 60k delivery mans; 2k companies
- Apptite – US\$1.6 Million in GMV; 100k deliveries; 50k users
- Sharity – R\$ 2 Million in donations; 100k users
- Desabafa - 700k posts

Product & Leadership Experience

Product Owner (Since 2018)

Business Analyst (Since 2010)

Project Manager (Since 2018)

Techlead (Since 2013)

CTO (Since 2013)

From my first projects onward I gravitated to the space between the client and the code: understanding what a business actually needs, then turning it into something a team can build and ship. I excel at discovery, stakeholder interviews, documenting requirements, wireframing, prioritization and roadmap management — and I stay technical enough to judge feasibility and cost myself instead of relaying the question.

Technical Skills

• Product

Discovery / Requirements (Since 2010), Backlog / Roadmap / Prioritization (Since 2016), Stakeholder Management (Since 2013), Wireframing / UX (Since 2011)

• Backend

Node.JS (Since 2012), GraphQL / REST / WebSockets (Since 2018), MySQL / PostgreSQL / MongoDB / Prisma (Since 2007), Java / Kotlin (Since 2008)

• Web Frontend

Javascript (Since 2008), Typescript (Since 2018), ReactJS / NextJS (Since 2017), Tailwind (Since 2020)

• AI Engineering

AI Process Automation (Since 2025), Agent Development / MCP / Skills (Since 2025), Harness Engineering (Since 2026), Spec-Driven Development (Since 2025)

Work Experience

33Labs • Principal Engineer | Smart Contract Engineer • Sep 2025 - current

Taking a hands-on engineering role here was a deliberate choice. After 11 years as CTO, I wanted to go deep on DeFi architecture next to the engineers who audit it — so that when I own a product in this space, I know exactly what I am asking a team to build and what it costs.

At 33Labs (formerly 33Audits), I worked on the design and development of advanced DeFi protocols, focusing on composability, capital efficiency, and developer experience.

The company began as a smart contract auditing firm, which gave me hands-on, daily experience identifying and preventing vulnerabilities. I developed protocols end to end — architecture, implementation, and testing — with security and gas optimization as constant priorities throughout. This led me to a key conviction: the auditing process should start at the architecture stage, before any code is written. To support this, I integrated specialized tooling and AI agents into our development and auditing workflow.

Tech: Solidity, Foundry, Ethereum, EVM, Uniswap V3, Uniswap V4, System Architecture, AI Tooling · <https://www.33labs.ai/>

American Spend • Principal Engineer | Smart Contract Engineer • Mar 2026 - May 2026

American Spend is a prediction market protocol combining yield generation with market-based price discovery through a hybrid market structure.

Designed a hybrid market model starting with a parimutuel phase and transitioning into a Central Limit Order Book (CLOB).

Tech: Solidity, Foundry, Prediction Market, Vault, CLOB, Ethereum, EVM · <https://spend.market/>

Mosaic • Principal Engineer | Smart Contract Engineer • Sep 2025 - Feb 2026

Mosaic is a protocol designed to make smart contract development more accessible, cost-efficient, and secure through flexible, pre-audited, and composable contracts, with AI-assisted tooling for generating contract compositions from natural language.

Contributed to the core architecture and designed reusable protocol modules with a strong focus on composability.

Designed and implemented a Launchpad workflow powered by a bonding curve, graduating into a Uniswap v3 liquidity pool for smooth price discovery and liquidity transition.

Built a Uniswap v4 hook combining CLMM behavior with a bonding curve model, later transitioning into a standard AMM.

Developed abstractions to support modular and extensible DeFi primitives.

Tech: Solidity, Foundry, Uniswap V3, Uniswap V4, Ethereum, EVM · <https://mosaic.build/>

Simpli • Product Owner | Business Analyst | Project Manager | CTO • Oct 2013 - May 2025

Simpli started as a startup focused on building a B2C mobile product, but quickly evolved into a fast-growing software house serving a wide range of clients. In its first year, the company pivoted to delivering custom distributed applications and scaled organically through consistent delivery and client satisfaction. Over 11 years, we delivered 50+ successful digital products for both startups and enterprise clients, while also launching and maintaining our own proprietary platforms.

From the beginning, Simpli was an early adopter of emerging technologies like mobile development and blockchain. I played a key role in shaping both the technical direction and business strategy of the company, leading system architecture, technical roadmaps, and documentation, and building an engineering org of 30 including 5 team leads. My work ranged from hands-on technical leadership to driving innovation through research, process design, and technology adoption — helping turn product ideas into real businesses by aligning technical execution with market opportunities.

Below are more details about some key projects:

Tech: Java, Kotlin, TypeScript, Node.js, React.js, Next.js, React Native, Android, MySQL, GraphQL, Electron.js, Smart Contracts

Enclave Wallet • Product Owner | Project Manager | UI/UX Designer | TechLead • Jun 2024 - Feb 2025

Enclave is a Wallet built to embrace non-blockchain users. It combines cutting edge technologies like Abstract Accounts, WebAuthn and Gasless transactions, to allow the onboarding to be smooth as traditional web applications. Working with a small team, I was responsible for the product vision, usability, development of the whole wallet frontend and contributing to the Smart Contracts.

Tech: TypeScript, React.js, Next.js, Node.js, Smart Contracts, Cryptography · <https://enclavewallet.com>

Blockchain Services Library • TechLead • Aug 2023 - Jul 2024

BSLib is a multi-chain library designed to perform common wallet operations in a generic manner, abstracting and normalizing the unique characteristics of each blockchain. It includes implementations for Neon3, NeoLegacy, and various EVM networks.

This library is extensively used by Neon Wallet Desktop and Mobile applications. As the creator of BSLib, I aimed to enable code reuse across the wallets maintained by my team.

Tech: TypeScript, Node.js, Blockchain, Cryptography · <https://github.com/CityOfZion/blockchain-services>

Letter • Engineering Manager • Feb 2022 - Apr 2023

In partnership with the Associated Press, Dapper Labs, and COZ, Letter is a multi-chain (Neo and Flow) platform that provides authentication mechanisms based on NFTs. This allows systems to validate access in a decentralized manner. I was responsible for architecting the solution, which included SmartContracts on both networks, an SDK that integrates both networks simultaneously, and several key integrations.

Tech: TypeScript, React.js, Smart Contracts, Cadence, Flow

Neon Wallet • Engineering Manager • July 2021 - July 2024

Neon is the leading wallet in the Neo ecosystem, with over \$1 billion in traded volume. I was responsible for architecting its mobile version and later contributed to the desktop app. During my time on the project, I tackled key challenges such as supporting multiple blockchain networks, managing multiple accounts simultaneously, implementing WalletConnect integration, and developing the protocol for network interaction, along with several other critical integrations.

Tech: TypeScript, React.js, React Native, Blockchain, Electron.js • <https://coz.io/neon-wallet/>

LDC's She Digital • Product Owner | Project Manager | TechLead • Oct 2019 - Nov 2020

Louis Dreyfus Company, one of the largest commodity traders in the world, commissioned the development of a 'Safety, Health, and Environment' management platform for use across all its global units. I architected and developed this project entirely. The platform included integrations with Azure Active Directory for authentication and user management. The most significant challenge was translating all the company's needs into a flexible application that could scale without requiring code modifications.

Tech: TypeScript, React.js, Kotlin, Java, MySQL

iTrack • Business Analyst | Engineering Manager | TechLead • Nov 2016 - Jun 2018

iTrack Brasil is a B2B delivery services platform, integrating multiple systems, with nearly 60,000 couriers. Key challenges included various integrations and optimizing large data volumes. With over 50 million invoices and 2,000 companies registered, the platform's growth was further boosted by its acquisition by MadeiraMadeira in 2021.

Tech: TypeScript, React.js, Kotlin, Java • <https://itrackbrasil.com.br>

Apptite • Business Analyst | Project Manager | TechLead • Sep 2015 - July 2017

Apptite was a food delivery app for iOS, Android and the web. It gained recognition with acceleration by '500 Startups'. With media coverage, it established itself as an important platform in the artisanal food market. I was the main responsible for the initial planning, structuring and development of the platform.

Tech: Android, Java

Academic Qualifications

Pontifícia Universidade Católica de São Paulo (PUC-SP) • Bachelor, Computer Science • 2008 - 2011

Bachelor's degree in Computer Science from Pontifícia Universidade Católica de São Paulo, one of Brazil's leading higher education institutions.
