x.com/melanke

Sao Paulo, Brazil (UTC-3)

I'm a Tech Lead and Engineering Manager with 19+ years in software and 12+ years leading teams of up to 30, across roles as CTO, Tech Lead, Business Analyst, and Product Owner. I co-founded Simpli and grew it from a two-person startup into a 30-person software house that delivered 50+ products for startups and enterprise clients.

My focus as a leader is translating business goals into technical roadmaps: gathering requirements, architecting solutions, and keeping delivery aligned with what the product and the business actually need. I favor listening, delegation, and collaborative decision-making over top-down direction, and I make a point of mentoring engineers, including a stint as a mentor in the BuildGuidl Batch Program onboarding new Web3 developers.

Lately I've been bringing AI into how teams work, from agent-assisted development workflows to process automation, while staying hands-on enough to keep credibility with the engineers I lead. I'm looking for a role where I can own both the technical direction and the people side of a team.

Notable Achievements

- [Neon Wallet](#) – Over US\$1 Billion in traded volume
- Runin Multilaser – Embedded in over 20 Million devices
- [iTrack](#) – 50 Million invoices registered; 60k delivery mans; 2k companies
- Apptite – US\$1.6 Million in GMV; 100k deliveries; 50k users
- [Sharity](#) – R\$ 2 Million in donations; 100k users
- Desabafa - 700k posts

Leadership Experience

CTO (Since 2013)

Techlead (Since 2013)

Business Analyst (Since 2010)

Product Owner (Since 2022)

Project Manager (Since 2018)

From college onward, my advanced experience fostered a natural leadership spirit and a drive to guide others toward the best results. Leading teams taught me the importance of listening, inclusivity, delegation, and collaborative discussion. I excel in architecting solutions, understanding stakeholder demands, documenting requirements, and planning solution structures, along with discovery processes and roadmap management.

Technical Skills

• Backend

Node.JS (Since 2012), GraphQL / REST / WebSockets (Since 2018), MySQL / PostgreSQL / MongoDB / Prisma (Since 2007), Java / Kotlin (Since 2008)

• AI Engineering

AI Process Automation (Since 2025), Agent Development / MCP / Skills (Since 2025), Harness Engineering (Since 2026), Spec-Driven Development (Since 2025)

• Web Frontend

Javascript (Since 2008), Typescript (Since 2018), ReactJS / NextJS (Since 2017), Tailwind (Since 2020)

• Blockchain

Ethereum / Solidity / Foundry (Since 2020), Architecture / Fuzzing / Gas Optimization (Since 2023), Wagmi / Viem / The Graph (Since 2023), Solana / Flow / Neo N3 (Since 2018)

Work Experience

33Labs • Software Engineer | Main Smart Contract Developer • Sep 2025 - May 2026

At 33Labs (formerly 33Audits), I worked on the design and development of advanced DeFi protocols, focusing on composability, capital efficiency, and developer experience.

The company began as a smart contract auditing firm, which gave me hands-on, daily experience identifying and preventing vulnerabilities. I developed protocols end to end — architecture, implementation, and testing — with security and gas optimization as constant priorities throughout. This led me to a key conviction: the auditing process should start at the architecture stage, before any code is written. To support this, I integrated specialized tooling and AI agents into our development and auditing workflow.

<https://www.33labs.ai/>

American Spend • Software Engineer | Main Smart Contract Developer • Mar 2026 - May 2026

American Spend is a prediction market protocol combining yield generation with market-based price discovery through a hybrid market structure.

Designed a hybrid market model starting with a parimutuel phase and transitioning into a Central Limit Order Book (CLOB).

<https://spend.market/>

Mosaic • Software Engineer | Main Smart Contract Developer • Sep 2025 - Feb 2026

Mosaic is a protocol designed to make smart contract development more accessible, cost-efficient, and secure through flexible, pre-audited, and composable contracts, with AI-assisted tooling for generating contract compositions from natural language.

Contributed to the core architecture and designed reusable protocol modules with a strong focus on composability.

Designed and implemented a Launchpad workflow powered by a bonding curve, graduating into a Uniswap v3 liquidity pool for smooth price discovery and liquidity transition.

Built a Uniswap v4 hook combining CLMM behavior with a bonding curve model, later transitioning into a standard AMM.

Developed abstractions to support modular and extensible DeFi primitives.

BuidlGuidl Batch Program • Mentor • Feb 2025 - Jan 2026

BuidlGuidl is one of the most impactful builder communities in the Ethereum ecosystem. One of its core initiatives is the Batch Program, which helps onboard new developers into the Ethereum space. As a mentor in the program, I guide participants through their first steps contributing to open source using Solidity, Hardhat, Wagmi, and Next.js.

Simpli • Software Engineer | CTO • Out 2013 - May 2025

Simpli started as a startup focused on building a B2C mobile product, but quickly evolved into a fast-growing software house serving a wide range of clients. In its first year, the company pivoted to delivering custom distributed applications, and scaled organically to a 30-person team through consistent delivery and client satisfaction. Over 11 years, we delivered 50+ successful digital products for both startups and enterprise clients, while also launching and maintaining our own proprietary platforms.

From the beginning, Simpli was an early adopter of emerging technologies like mobile development and blockchain. I played a key role in shaping both the technical direction and business strategy of the company. My work ranged from hands-on technical leadership to driving innovation through research, process design, and technology adoption. I led system architecture, created technical roadmaps and documentation, and helped turn product ideas into real businesses by aligning technical execution with market opportunities.

Below are more details about some key projects:

Enclave Wallet • Software Engineer | Product Owner | UI/UX Designer • Jun 2024 - Feb 2025

Enclave is a Wallet built to embrace non-blockchain users. It combines cutting edge technologies like Abstract Accounts, WebAuthn and Gasless transactions, to allow the onboarding to be smooth as traditional web applications. Working with a small team, I was responsible for the product vision, usability, development of the whole wallet frontend and contributing to the Smart Contracts.

Blockchain Services Library • Software Engineer | Techlead • Aug 2023 - Jul 2024

BSLib is a multi-chain library designed to perform common wallet operations in a generic manner, abstracting and normalizing the unique characteristics of each blockchain. It includes implementations for NeoN3, NeoLegacy, and various EVM networks. This library is extensively used by Neon Wallet Desktop and Mobile applications. As the creator of BSLib, I aimed to enable code reuse across the wallets maintained by my team.

Letter • Software Engineer | TechLead • Feb 2022 - Apr 2023

In partnership with the Associated Press, Dapper Labs, and COZ, Letter is a multi-chain (Neo and Flow) platform that provides authentication mechanisms based on NFTs. This allows systems to validate access in a decentralized manner. I was responsible for architecting the solution, which included SmartContracts on both networks, an SDK that integrates both networks simultaneously, and several key integrations.

Neon Wallet • Software Engineer | TechLead • July 2021 - July 2024

Neon is the leading wallet in the Neo ecosystem, with over \$1 billion in traded volume. I was responsible for architecting its mobile version and later contributed to the desktop app. During my time on the project, I tackled key challenges such as supporting multiple blockchain networks, managing multiple accounts simultaneously, implementing WalletConnect integration, and developing the protocol for network interaction, along with several other critical integrations.

LDC's She Digital • Software Engineer | TechLead • Oct 2019 - Nov 2020

Louis Dreyfus Company, one of the largest commodity traders in the world, commissioned the development of a 'Safety, Health, and Environment' management platform for use across all its global units. I architected and developed this project entirely. The platform included integrations with Azure Active Directory for authentication and user management. The most significant challenge was translating all the company's needs into a flexible application that could scale without requiring code modifications.

iTrack • Software Engineer | TechLead • Nov 2016 - Jun 2018

iTrack Brasil is a B2B delivery services platform, integrating multiple systems, with nearly 60,000 couriers. Key challenges included various integrations and optimizing large data volumes. With over 50 million invoices and 2,000 companies registered, the platform's growth was further boosted by its acquisition by MadeiraMadeira in 2021.

<https://itrackbrasil.com.br>

Apptite • Software Engineer | TechLead • Sep 2015 - July 2017

Apptite was a food delivery app for iOS, Android and the web. It gained recognition with acceleration by '500 Startups'. With media coverage, it established itself as an important platform in the artisanal food market. I was the main responsible for the initial planning, structuring and development of the platform.

Multilaser Runin • Software Engineer • Aug 2014 - Out 2014

Multilaser, one of Brazil's largest cell phone and tablet manufacturers, faced high demand for quality control tests, which were previously done manually. I helped develop an Android application to automate these tests, covering CPU, RAM, GPS, screen brightness, and touch functionality. This automation significantly improved productivity in tablet production, and the app has since tested over 20 million devices.

Academic Qualifications

Pontifícia Universidade Católica de São Paulo (PUC-SP) • Bachelor, Computer Science • 2008 - 2011

Bachelor's degree in Computer Science from Pontifícia Universidade Católica de São Paulo, one of Brazil's leading higher education institutions.
